

# EXTREME PROXY HARVESTER AND CHECKER

## EXTREME PROXY HARVESTER AND CHECKER

By Jeff Childers

### INSTRUCTIONS

Paste the files in your server directory. Now go to your sources folder.

Here inside will be your proxy source url list.

Make sure that you only use good proxy sources that stay current. This is important. To test this only use a few good sources to start with. This will **NOT** work on sites that display proxies in Javascript code from a database.

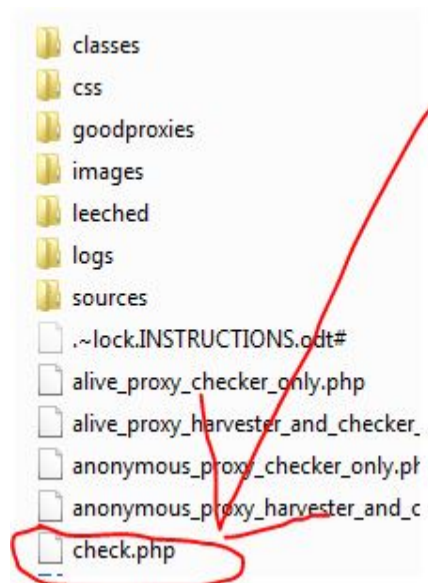

This script uses **REGEX** to grab proxies and curl to test them. To check for Anonymous proxies you must upload the included proxy Judge to a hosting server. This proxy Judge will **NOT** work on localhost. It will **NOT work on XAMPP** or **WAMP**.

**This is a custom made proxy judge and this script will not work with other proxy Judges. It will only work with the included proxy Judge.**

## “check.php” = Proxy Judge File

For Anonymous proxy checking you must also edit this line in the Anonymous proxy scripts. Open with any text editor.

Replace **mydomain.com** with the domain where you uploaded the proxy Judge named check.php.

```
70
79 $ch = curl_init(); //initizlize and set url
80 curl_setopt ($ch, CURLOPT_URL, "http://www.mydomain.com/check.php");
81 curl_setopt($ch, CURLOPT_HEADER, 1); //show headers
82 curl_setopt($ch, CURLOPT_HTTPGET,1);
```

This can be used with any LINUX hosting plan or local server on your computer but the proxy judge must be on a public domain.

Now just open your browser on XAMP, WAMP or any other server to localhost and execute one of the PHP scripts.

You can run this on your server ever few hours with a **CRON** Job setup. Then if you want retrive the txt file with good proxies every so often use **Wget**.

“**Success.txt**” = Good proxies saved in this file.

**leeched folder:** Where all the proxies that have been harvested. These are the proxies that are tested.

**Logs:** Creates a log file with time stamps.

**This is PHP and maybe slower than some applications however this can run 24 hours on a shared hosting account automatically with a CRON job.**

## Now Proxy Checking

- ❗ 188.239.18.161:8080 **Error:** Connection timed out after 8000 milliseconds ❌
- ✅ 192.187.100.50:3128 Proxy is Alive! Total time: 1.235 seconds! ✅
- ⚠️ 149.56.144.218:8080 There was no Error connecting to proxy, but its still no good.... (No content from source) ❌
- ❗ 95.78.172.184:8080 **Error:** Operation timed out after 8000 milliseconds with 0 bytes received ❌
